

## Instructions for Use

Carefully read to the end and follow the instructions.

※ Please read the precautions printed on the outside as well.

## Precautions before use

- Make sure to use on dry hair. Using on wet hair will result in poor color application.
- If a styling product other than a hair spray to fix hair will be used on the area of use, use it before using this product. Using the product afterward may result in poor color application or cause the colorant to come off.
- Take extra caution when handling the product. The coloring agent will not come off easily if it gets on clothing, hats, walls, carpets, floors, and any fabrics.

## Cautions during use

- ① Liquid will spill out if the container is tilted on its side. Be careful when pulling out the applicator or applying.
- ① To avoid getting on clothes, place a towel that you don't mind staining onto your shoulder.
- ① A sponge is used to effectively apply the liquid to the hair. Please be careful of the following as the sponge may break:
  - Do not pull the sponge portion out of the bottle at an angle.
  - Do not press down the sponge portion hard when applying.
  - Do not scrape off the liquid inside the bottle with the sponge portion.

### 1 Shake well with the cap closed so that the liquid mixes well.

Repeat shaking the bottle approximately 10 times when it clicks.

If not sufficiently mixed, the liquid may not be evenly distributed and may not result in a beautiful finish.

### 2 While holding the container upright, loosen the cap and pull the sponge portion slowly and straight out.

Liquid may drip from the sponge, so adjust the amount of liquid at the opening of the container.

Place the cap upright to prevent it from rolling.

### 3 Pull out hair you want to apply the product on.

Liquid may spill out if the container is vigorously moved while holding the cap.

### 4 Lightly roll the sponge and apply the product gently.

The product colors well with a single swipe, with no need for applying multiple coats.

If you apply in layers, it may take longer to dry or the texture may deteriorate after drying. Pay attention not to get the product on fingers when applying.

### 5 Comb or brush hair.

Please use a comb or brush that you don't mind staining, as the coloring agent adheres.

### 6 Let dry well for a few minutes.

Please note that it is difficult to remove if it adheres to clothing, hats, scrunchies, or other fabric hair accessories.

## Cautions during use

- Do not use on parts other than head hair, such as eyebrows and eye lashes.
- Do not tilt the container on its side when pulling out the sponge portion or while applying. Liquid will spill out if the container is tilted on its side.
- While holding the container upright, loosen the cap and pull the sponge portion slowly and straight out. If pulled out too quickly, liquid may splatter. In addition, because the liquid contained in the sponge portion may overflow, please insert it back into the container straight and slowly.
- When applying, place the container on a flat surface. If you start applying while holding the container, the liquid may spill out.
- If the product gets on the scalp or skin, wipe off with damp tissue paper, etc.

## Cautions after use

- Please note that strongly rubbing the area where the product is used while your hair is wet from sweat, rain, washing your face, etc., may cause color transfer and stain your hands, clothes, towels, etc.
- Sleeping with the product on hair may stain bedding.
- After use, close the cap tightly to prevent the contents from spilling or drying out.
